Overview

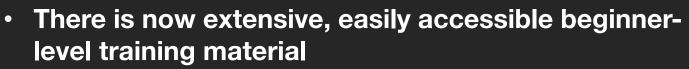

- Background
 - Research is changing!
 - The "skills gap"
- Learning Pathways
 - Why do we need them?
 - Challenges in developing learning pathways
- UNIVERSE-HPC
 - Brief overview of the UNIVERSE-HPC project
- Future work and next steps

Research is changing!

- We are seeing an accelerating shift towards "digital research"
 - Technical elements now part of research across almost all domains
 - Work is increasingly computationally intensive bigger data, larger simulations, novel architectures, etc.
 - Greater complexity, more specialist skills, things change quickly
- Who provides the necessary technical skills?
 - Traditionally, often (self taught?) researchers
 - Now, increasingly Research Software Engineers and other RTPs.
 - Big changes in the software, data and infrastructure fields
 - Different drivers and aims when working in a research context
- Why is this important?
 - Greater focus on sustainability and management of software / data
 - REPRODUCIBILITY!

 Carpentries, CodeRefinery, university modules, online tutorials, etc.

 Intermediate and advanced material much harder to find

How do we bridge the "skills gap" between beginner knowledge and expert professionals?

(C) all (I) t() function t() {for (var e r-t) fall

L=t[i]:0!==0[\]&&(n=!1)}n&&(u.splice(r-1)=(r-1)) (o[r]) return n[r].exports; var t=n[r]-fi:r[i] exports

t. l=!0, t. exports}f.m=e,f.c=n,f.d=function(e,f.)(f.m)

bject.defineProperty(e, Symbol. toStringTag (white Toutet)

function(e){var r=e&e,_esModule:function

andow webpack]sonp||[], l=i, push, bink

p=l:t()}([]);!function(e)(func

function(e,r){return Object.

= function(e,r){if(1&r&&(e=f(e)) &r| === e=##

t=Object.create(null);if(f.r(t) Dject. 2&r&&"string"!=typeof e)for(var n is elf-lite feet

The "skills gap": Basic-level Skills

- Many different training and skills providers supporting the research community - some open source examples:
- The Carpentries (https://carpentries.org/)
 - Software Carpentry; Data Carpentry; Library Carpentry
 - Unix Shell; Introductory Python / R, Version Control (Git)
- CodeRefinery (https://coderefinery.org/) Basic to intermediate
 - Version Control (Git), Jupyter notebooks, testing, reproducible research, modular code development
- HPC Carpentry* (https://www.hpc-carpentry.org/) Basic to intermediate
 - Python for HPC, Chapel, Terminal, parallelization, Snakemake

The "skills gap": Advanced Skills

- Limited scope for general training
 - Courses run by groups including ARCHER2, PRACE, Pawsey, ...
 - Courses can be focused around specific infrastructure.
- Much skill development the result of on-the-job training and experience
 - Takes a long time to build the necessary experience and skills.
- Infrastructure, hardware, software all changing rapidly
 - At the advanced level, in particular, need ongoing development of new skills.
- Proper pathways and structures around training are key

Learning and skills pathways (I)

- Why do we need them?
 - Research Software Engineering is a cross-cutting discipline.
 - Practitioners come from a range of research or industry backgrounds.
 - Need to provide routes that highlight how to gain necessary competencies from a range of starting points.
- Support more effective and structured skill development
 - Self-taught developers frequently learn only the skills they need, when they need them.
 - Easy to miss key related skills and best practices that support, e.g. quality, efficiency, ...
 - Possible to progress a long way on limited foundational knowledge this can lead to long-term future challenges.

Learning and skills pathways (II)

- Huge increase in the need for computational skills in research
 - Software, data and computation now a core part of research lifecycle in almost all domains.
 - Demand is growing but there is a skills shortage.
 - Time to develop specialist skills too great for the speed of growth of their use in research.
- Clear and structured pathways should
 - Stimulate growth of training material development in required areas.
 - Reduce the time for RSEs/researchers to develop key skills.
 - Provide a clearer idea of where to go next for practitioners wanting to expand their learning.

Challenges in developing learning pathways

- Domain-based or skills-based structure?
 - e.g. "I currently know basic Python development and how to use Git/GitHub, what should I be looking to know next?"
 - e.g. "I am a computational chemist with three years of experience including developing software, what skills should I be looking to learn to make me a more effective researcher?"
- Skills-based structures are easier to develop but may not map directly onto researchers expertise – likely to be better for RSEs
- Many different domains, different views on what's important

1=c[i]:0!=0[l]&&(n=!1)}n&&(u.splice(r.1) e(free))

t. l=10, t. exports}f.m=e,f.c=n,f.&=function(e,r=(6.1))

(e_r_{enumerable:!0,get:t})},f.r=function(e)(

blect.defineProperty(e, Symbol. toStringTag (white Toutet)

Competencies and Skills

Learning Pathways

Course Development + Delivery

Community Support + Contributions

Identify the competencies and skills required by RSEs as they progress through their careers.
Understand where these competencies are already being taught.

Define different curriculum, learning pathways, and delivery mechanisms for providing training in RSE competencies, including as taught programmes, online/self-paced learning and professional development.

Development of missing modules.
Packaging of existing and new modules into different formats. Pilot delivery of courses.

Facilitate professional networking and peer support for RSEs.
Develop a community of maintainers for open materials.

Equity, Diversity and Inclusion

Future work and next steps

- Understand more about what the community wants
 - What skills do people want/need to learn?
 - What do you think is missing?
- Build on great examples
 - Have you seen particular examples of structured training content that you think are great?
 - What do we need to see more of?
 - Maintain awareness of available content
- Test emerging pathways within the community
 - Test workshops / approaches / structures
 - Get feedback!

Thank you
